Appl. No. 09/821,942 Amdt. Dated November 23, 2003

Reply to Office action of September 23, 2003

Docket No. 8246 Customer No. 27752

Pending Claims

- 1. (Previously Amended) A leave-in hair cosmetic composition, comprising fluid-encapsulated, flexible microspheres exhibiting a mean particle size of less than about 300 µm in diameter, a hydrophobically modified water-soluble or water-swellable polymer, and an aqueous carrier, wherein the combination of the polymer and the microspheres results in a solid continuous or semi-continuous film network.
- 2. (Previously Amended) A leave-in hair cosmetic composition, comprising:
 - (i) from about 0.25% to about 15%, by weight of the composition, of fluidencapsulated, flexible microspheres which exhibit a mean particle size of less than about 300 μm in diameter;
 - (ii) from about 0.025% to about 10 %, by weight of the composition, of a hydrophobically modified water-soluble or swellable polymer; and
 - (iii) an aqueous carrier,

wherein the combination of the polymer and the microspheres results in a solid continuous or semi-continuous film network.

- (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres have a density of from about 5 kg/m³ to about 200 kg/m³.
- 4. (Original) A leave-in hair cosmetic composition according to Claim 3, wherein said microspheres have a density of from about 5 kg/m³ to about 100 kg/m³.
- (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres comprise a thermoplastic material wall.
- 6. (Original) A leave-in hair cosmetic composition according to Claim 5, wherein said thermoplastic material is a polymer or copolymer of at least one monomer selected from the group consisting of acrylates, methacrylates, styrene, substituted styrene, unsaturated dihalides, acrylonitriles, and methacrylonitriles.
- 7. (Original) A leave-in hair cosmetic composition according to Claim 5, wherein said thermoplastic material is a polymer or copolymer comprising amide, ester, urethane, urea, ether, carbonate, acetal, sulfide, phosphate, phosphonate ester, and siloxane linkages.

Docket No. 8246 Customer No. 27752

- 8. (Original) A leave-in hair cosmetic composition according to Claim 6, wherein said thermoplastic material is a polymer or copolymer of at least one monomer selected from the group consisting of acrylic, styrene, vinylidene chloride, acrylonitriles, and methacrylonitriles.
- (Original) A leave-in hair cosmetic composition according to Claim 8, wherein said thermoplastic material is a copolymer of acrylonitrile and methacrylonitrile.
- (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres are permeable.
- (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres are non-permeable.
- 12. (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres are expanded upon heating.
- (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres exhibit a mean particle size ranging from about 5μm to about 100μm.
- 14. (Original) A leave-in hair cosmetic composition according to Claim 1, wherein said microspheres exhibit a mean particle size ranging from about 8μm to about 80μm.
- 15. (Original) A leave-in hair cosmetic composition according to Claim 1, wherein surface of said microspheres is modified by attachment of an ionic group.
- 16. (Original) A leave-in hair cosmetic composition according to Claim 1, wherein surface of said microspheres is modified by attachment of an organic or inorganic material.
- 17. (Original) A leave-in hair cosmetic composition according to Claim 1, wherein the aqueous carrier is selected from the group consisting of a leave-in conditioning product, a leave-in styling product, a leave-in coloring product, and mixtures thereof.

Appl. No. 09/821,942 Amdt. Dated November 23, 2003 Reply to Office action of September 23, 2003 Docket No. 8246 Customer No. 27752

- 18. (Previously Amended) A leave-in hair conditioning composition comprising:
 - (i) from about 0.025% to about 10%, by weight of the composition, of a hydrophobically modified carboxylic acid/carboxylate copolymer;
 - (ii) from about 0.25% to about 10%, by weight of the composition, of fluidencapsulated, flexible microspheres which exhibit a mean particle size of less than about 300μm in diameter; and
 - (iii) an aqueous carrier,

wherein the combination of the copolymer and the microspheres results in a solid continuous or semi-continuous film.

- 19. (Canceled)
- 20. (Original) A method for enhancing hair volume by applying to hair an effective amount of a composition according to Claim 1.
- (Original) A method for enhancing hair volume by applying to hair an effective amount of a composition according to Claim 17.
- 22. (Original) A method for enhancing hair volume by applying to hair an effective amount of a composition according to Claim 18.
- 23. (Canceled)
